CONTENTS

1. New Features
2. Issues Fixed Since 4.0.1.12187
3. Known Issues

1. New Features

Description

Smart Card Support

GO-Global provides support for smart card document signing and smart card authentication. These features are supported on Windows clients only. Both features are disabled by default and must be enabled via the Cluster Manager after updating the host.

Known limitations for smart card support include the following:

- The user is given the option to sign in with a user name and password even if the Standard authentication option is disabled in the Cluster Manager. A message on the Windows Security dialog indicates this.
- No progress message is displayed while the user is being authenticated.

Automatic Client Keyboard Support

GO-Global's automatic client keyboard option allows administrators to configure GO-Global hosts to automatically work with any client keyboard. When this option is enabled, users can switch between keyboards on the fly using the local keyboard switching features of their client device, and use the local input editor (IME) of the client. With this feature, it is no longer necessary to install keyboard layouts on the GO-Global host or keyboard mapping files on GO-Global clients. The feature is supported on all GO-Global clients.

In order to provide a consistent user experience for existing GO-Global users, the automatic client keyboard option is disabled by default. It can be enabled per user by adding **-kb ClientSideIME** to the client shortcut or by adding the argument **&keyboard=ClientSideIME** to hyperlinks that reference the logon.html page. Automatic client keyboard support can be enabled for *all users* by setting **ClientSideIMEEnabled** to true in the **HostProperties.xml** file.

2. Issues Fixed Since 4.0.1.12187

Bug ID	Case ID	Description
12757	29681	Changes to printer settings are not saved across sessions.
12819		Program Window does not resize and center at session start on the iPhone Client.
12623	29400	Z-Order issues
12667	29436 29547 29370	The Program Window does not get focus when it comes up.
12790	30021	Z-Order issue/Program Window appears behind another window.
11948		Request for client-side IME input editor.
12876	30299	Last line of file is dropped when saving to a client drive.
12777	29370 29436 29547 29793 29954 30077	Program Window is frozen.
12740		The client version is not being logged.
11546		Release licenses when sessions are suspended.
12859		Request for Client keyboard implementation on the Mac OS X Client to work on the fly

11583		On the Linux and Mac Client, printer applet driver settings do not stick.
13129		Painting issue when minimizing the Program Window.

3. Known Issues

Description
The ActiveX Control cannot be installed on a 64-bit GO-Global Host via the browser.
Encrypted PDF documents cannot be printed via the Universal Printer Driver.
GO-Global does not support Windows Themes.
Client file and drives operations are slow over Internet and WAN connections.
The GO-Global Client cannot be run in Apple Safari on Windows.
On Japanese systems, the IME window may not display in the usual location.
When explorer.exe is run in the background of the session, the session will take longer to start.
F-Secure Antivirus is not supported on GO-Global hosts.
Avast Antivirus is not supported on GO-Global hosts.
Bitdefender Antivirus is not supported on GO-Global hosts.
QuickBooks 12 is not supported on GO-Global.
On Mac OS X 10.8 Mountain Lion, users need to disable Gatekeeper in order to install the native Mac OS X Client.
Menus in the IME bar may be difficult to close. If you encounter this issue, move the mouse back and forth over the menu, and it will close.
